Hi,

I have been trying to upload pictures to my dropbox and for what ever reason it is saying that I am not connected to the internet. I have found some info on forums saying that I need to change the proxies, but the steps listed don't make sense as there is no "gear" to click and go in and change the proxy settings. I am using dropbox through Chrome on my windows OS. Please let me know how I can change these settings while on my setup.Any Idea?

Thanks!

I didn't find the right solution from the Internet.

There is problem in uploading any sort pictures or file into dropbox by using chrome browser. As chrome is having security concerns where it will not allow uploading. It is better using a third party software which can be downloaded from essay topics blog and install it which supports youâ€™re uploads into dropbox.
